"The RV Doctor"

To the staff and employees of Protect All:

Just a quick note to say thank you for the many fine products you offer the RVing public. As the author of the question and answer column, "The RV Doctor," I receive many requests each month for advice on which products truly work on today's recreational vehicles. I have received so much correspondence that I wrote and produced an entire seminar on the proper use of products and detailed methods of exterior care. It has become one of my most requested seminars. In order to conduct an unbiased, objective analysis to obtain accurate information for seminar content, I request products from suppliers to test and evaluate on my own. One of my promises to the attendees of my seminars and the readers of the RV Doctor Column is that if I mention a product by name, it means I have personally tested or managed evaluations of that product and can attest to the fact that it indeed works. Quite often I receive first-hand feedback from the best source of advertising any company can hope for - active and vocal RVers. There has not been one seminar that the name "Protect All" has not surfaced at some point during the discussions. Obviously your company is doing something right. My testing has proved it many times and from the trenches, RVers have expressed to me how Protect All products have performed as advertised on the many materials found in and on the modern RV; fiberglass, plastics, aluminum, EPDM, chrome, glass, rubber, etc. In a world filled with marketing hype, innuendo and blatant exaggeration, it is a breath of fresh air to see a company with integrity stand behind their products; products that do what you say they will do. It is my opinion that RVers everywhere should give Protect All products a try for cleaning, protecting and performing restorative maintenance on the exterior surfaces of their recreation vehicles. They will be glad they did. Keep up the good work!

Regards,

Gary Bunzer
